

Please Keep Grass Clippings off Street and other paved areas

(Violation of Ordinance 16-531)

Why it Matters?

Grass clippings, leaves and other debris clogs gutters and storm drains reducing the amount of stormwater that can move through the system. The accumulation of debris can cause hazardous flooding.

What should be done with Grass Clippings?

Leave clippings on your lawn to naturally decompose and fertilize, or make a compost pile.

A tip for proper lawn maintenance is to mow high and often taking off only 1/3 of the length of grass. The result should be less weed growth.
